## INSTRUCTIONS

### ORDERING PARTS

In ordering parts, kindly observe the following instructions:

Give Part number as well as name of part wanted.

Give size and serial number of Feeder for which parts are ordered.

*(Serial number of Feeder will be found on name plate attached to Feeder Frame.)*

State definite shipping instructions, express, freight or parcel post.

When ordering by wire, use Code words listed in left hand column, specifying quantity of each part wanted. The Code word will indicate to us the number and name of part.

By giving full details as suggested, all possibility of error will be avoided.

### RETURNING PARTS

When returning parts for repairs, kindly observe the following instructions:

Prepay transportation charges on parts returned for repairs.

Mail instructions (do not pack letter with parts) stating definitely what work is to be done and specify shipping instructions for return.

Tag each part with your name and address as given in your letter of instructions.

### RETURNING PARTS FOR CREDIT

When returning parts for credit, write us giving number and names of parts and reason for returning.

Tag each part with your name and address, the number and name of the part and the word "new."

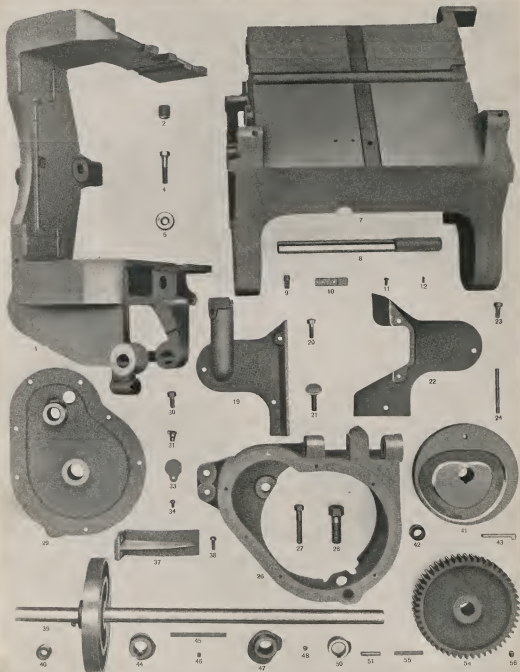

Prepay transportation charges on parts returned for credit.

### PARTS CAN BE ORDERED FROM OUR NEAREST BRANCH OFFICES

Prices are f. o. b. Factory or Branch Office from which parts are shipped. Prices subject to change without advance notice.

No invoice rendered for less than twenty-five cents.

### Miller Center Grippers

**M**ILLER Center Grippers are specially designed for Miller Feeder-Equipped Chandler & Price Presses. They are attached to the gripper bar in the same manner as the ordinary gripper, the offset providing ample clearance of registering device. On account of their narrow width (1-8 inch square) they may be safely used on jobs where center margin is as narrow as 3-16 inch. A set consists of two grippers, one left and one right, applicable for use with either a right or left registering device.

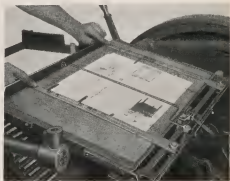

Miller Center Grippers are accurately formed from selected cold-rolled steel, with projection at bottom fitting into the narrow groove in the gripper bar (insuring perfect alignment with center margin of sheet and eliminating all danger of working loose and injuring form). The operating view reveals at a glance the many advantages of Miller Center Grippers. They positively eliminate the trouble experienced in stripping large sheets from the form, and are a valuable aid in overcoming "slurs."

### Miller Hold-Fast Grippers and String Fasteners

**M**ILLER Hold-Fast Grippers consist of a main or upright gripper and two auxiliary grippers of different lengths.

The auxiliary grippers are simply clipped onto the main gripper and are moved up or down to any desired position. They lie perfectly flat on the tympan, grip the sheet securely without endangering the register, and are of great help in overcoming "slur."

The Miller String Fastener can be applied to any make of gripper. By its use a string may be stretched across the tympan, either in a straight line or at an angle. May be used as a clip for holding cardboard frisket to blank operating head of numbering machine.

### Miller Fly-Wheel Guard

**I**N many States laws have been passed, and in other States laws are now being enacted, governing safety guards for platen presses, as well as for other printing office machinery. This includes a suitable fly-wheel guard.

The Miller Fly-Wheel Guard, pictured on the left, not only meets all of the requirements of the law, but actually eliminates accidents by preventing any part of the body from coming in contact with the rapidly moving spokes of the fly-wheel.

This guard is clamped securely to the spokes and is so constructed as to match neatly with the rim of the fly-wheel, giving the appearance of being a moulded part of the wheel itself, adding greatly to the appearance of the machine. It is made from a tough, fibre-like composition, extremely light in weight, yet very durable—as durable as the machine of which it becomes a part.

### Miller Variable Speed Drive Guard

**T**HE Miller Variable Speed Drive Guard has been designed to meet the popular demand of Miller Users for a simple, efficient, inexpensive "safety-first" belt and pulley guard that will comply with all city and state law requirements.

The accompanying view illustrates the simple manner of attaching—no holes to drill, no special fitting of any description. Note how completely it protects speed pulley, belt and motor pulley. Removed in an instant, giving free access to all belt and pulley adjustments. Its neat, symmetrical design adds to the general appearance of the machine. No Miller Unit is complete without it.

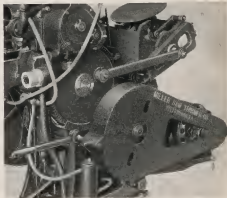

### Miller Variable Speed Drive

**T**HE Model "R" Variable Speed Pulley is especially designed for Miller Automatic Feeder-Equipped C. & P. Presses. The advantages it provides in the way of speed changes and shockless application of power makes for still greater efficiency and economy in the operation of these machines.

With the Miller Variable Speed Pulley one and the same lever starts the press, changes the speed, applies the brake, and stops the press. It is in reality a "Four-in-One-Drive," combining as it does *Varying Speeds, Shockless Starter and Shock Absorber, Self-Contained Brake and Non-Belt Shifting Loose Pulley.*

The Model "R" may also be applied to hand-fed presses, in all sizes, 8x12 up to and including 14½x22 sizes.

The Miller Variable Speed Pulley is especially adapted to motor drive but is applicable to any kind of power.
